Gryphon Mobile Skylight® system — a new standard in unmanned aircraft system (UAS) traffic management and drone security. Featuring an array of self-contained sensors, it serves as a complete mobile command center for many applications. Contained in a sleek, rugged van, the Gryphon Mobile Skylight system features 4x4 off-road capability and can be taken anywhere without a commercial driver’s license.

It’s made for rapid deployment in a wide range of applications, from airport security to search and rescue operations to infrastructure inspection and more. So no matter where you are or where you need to be, you can count on the Gryphon Mobile Skylight system for unmatched versatility, control and surveillance.

Introducing the first fully operational mobile UAS traffic management system

The Gryphon Mobile Skylight system fuses multiple technologies to provide the most comprehensive, clear airspace picture.

Intelligent drone detection BVLOS for safe UAS integration
**APPLICATIONS**

**Drone Security**
- stadiums
- prisons
- critical infrastructure
- airports
- theme parks
- intellectual property

**Safe UAS Integration**
- package delivery
- power line inspection
- railroad inspection
- precision agriculture
- entertainment
- mapping/surveying

**Gryphon R1410 Radar**
- large area, precision surveillance
- drone security and detect and avoid applications
- 10 km (sUAS), 27 km (general aviation)
- low false alarm rate
- low size, weight and power (SWaP); man transportable

**Gryphon S1200 Spectrum Sensor**
- fast target acquisition
- strong positive confirmation for targets of interest
- provides line of bearing
- up to 5 km detection range
- up to 360° coverage

**Slew-to Cue Camera**
- visual target identification
- optical tracking
- thermal and EO lenses
- 3 km detection range
- 360° Pan rotation
- 180° Tilt rotation

**FEATURES**

- complete mobile command center designed for rapid deployment
- small footprint, lightweight and low power radar designed specifically for precision detection of low flying small UAS
- broadband, passive spectrum RF monitoring used to confirm target types
- high resolution, slew-to-cue, optical tracking cameras used to get “eyes on” target
- receives ADS-B data
- built-in target tracking and classification to quickly identify both cooperative and non-cooperative targets
- ability to track hundreds of targets simultaneously for total situational awareness
- flexible, reliable, 24/7 operation in all weather conditions and terrains
- utilizes dual band mesh network for forward deployment of sensors
- SATCOM and cellular connectivity for reliable communications
- 35-foot masts to extend line of sight
- automatic data recording with playback for improving performance over time and providing data for legal action
- flexible interface that integrates with 3rd party sensor inputs
